

It is our pleasure to invite you to the 2016 Queen's Global Energy Conference. In our inaugural year, we will be hosting professionals from across the energy industry to discuss the future of global energy. Our multidisciplinary delegates from universities across Canada will be provided the unique opportunity to learn and engage in this common topic.

As the founders, we originally saw a lack in opportunity at Queen's and across Canadian Universities to learn about the energy industry as whole. Existing conferences and events were very niche and tailored to specific sectors, and did not provide the opportunity to educate students on the bigger picture. The motivation behind QGEC was to eliminate the niche and provide a floor where all sectors of the energy industry are equally represented. As a result, our delegates will be able to understand the interplay of all sectors of the energy industry and its connection with the future of energy as a **whole**. Embedded in our constitution is the aim to educate our delegates on emerging global energy trends through facilitating lines of communications between our guests, while also motivating delegates to become more involved in the energy industry.

The opportunity to partner with QGEC will enable you to promote your ideas as an industry leader. You will be able to convey your company's specialty in the energy sector to other industry professionals and passionate delegates alike. It is a chance to demonstrate your firm's attentiveness to relevant issues impacting the present and future of global energy.

We look forward to working with you in discussing the global energy outlook. Should you have any questions, please do not hesitate to ask, our executive team is here to fulfill your company's objectives. On behalf of QGEC 2016, we hope for you to consider this partnership and take this opportunity to educate and shape the future of energy.

Sincerely,

Jaynesh Mistry
Founder and Co-Chair

Yuchen Zhang
